

ADVANCED TECHNOLOGY CENTERS

VIDEO TRANSCRIPT

Jennifer Lange (00:06):

The Advanced Technology Center is a pool of deep technology experts that are really here to bring solid, strong delivery expertise to help enable the digital transformations for our various government clients.

Mainak Bardham (00:18):

At the Advanced Technology Center, we have an industrialized process for high quality delivery, from software engineering to project management, all the way to deployment. Clients can count on us because we have a proven process and the infrastructure for our federal clients.

Jennifer Lange (00:35):

I think one of the beauties of this Advanced Technology Center is the breadth of technologies that we provide. We've got strong individuals in this community that can adapt to those new technologies, which then gives us that power and ability to build more unique solutions for our clients. Building the tech skills from custom development solutions all the way through testing of any form, ERP solutions.

Mainak Bardham (01:01):

Salesforce.com, ServiceNow, analytics and data science, but then also things like Robotic Processing Automation.

Jennifer Lange (01:10):

And what's beautiful about that is our deep technology expertise that we have here in-house, we've got reach-back into those ATCs all over this world to find the best practices and the best uses of these new technologies so then we can evaluate them and adapt them to make sure we build more unique and innovative solutions.

Mainak Bardham (01:29):

We're hyperfocused on successful, on-time delivery, and what that means for our clients is the ability to deliver technology solutions at scale, at speed, and ensuring that they're exactly in line with what they're looking for.

Ben Peavy (01:45):

It was amazing to see the breadth of the different projects that we're working on, and basically, we're touching every citizen in the United States, and so, to be able to have employees that look like and are the makeup of what we are from the United States perspective means a lot. And when we have clients come to our facilities and they see the diversity that we have, many times they comment and they're like, "We can't believe that you have so many women and people of color. And the diversity here is just incredible."

Jennifer Lange (02:19):

There's such a vibrancy about the people here and the memories that we make and the careers that we provide for individuals, and I'm excited to actually see how many more barriers we can break, how much more innovative we can be.

Michael Miller (02:33):

For our clients. The biggest benefit is the impact that we have was an organization. There isn't a single man, woman, or child in the United States who have not been impacted by our services and resources, whether it be from mail capabilities to the taxes that you file on a daily basis. There is such a broad impact of the operations of the fabric of the United States that from a federal perspective, to me that's what is really exciting about what the center offers.
