

# Payer-Provider Collaboration

Achieving High Performance in Health Care

*High performance. Delivered.*

**In today's marketplace, new technologies, business imperatives, and governmental pressure are inspiring new relationships between payers and providers built upon connective technologies.**

Both payers and providers are experiencing escalating health care costs, with no end in sight. In the United States, the Health Insurance Portability and Accountability Act of 1996 (HIPAA) promise of tangible value remains elusive for many health organizations and, in other countries, single payer public sector models are under pressure to change. In addition, technology-savvy consumers are comparison shopping for health plans and care providers, increasing competition.

Technology, however, also presents an opportunity as mature and emerging solutions reduce previously prohibitive infrastructure requirements.

The time is ripe for an innovative, collaborative approach to address these problems. By collaborating, payers and providers can improve their relationships and develop a better understanding of each others' expectations, processes, policies and capabilities. Through a collaborative arrangement, payers and providers can capitalize on individual strengths to forge stronger relationships.

• Consulting • Technology • Outsourcing

## Our key service offerings

Payer-provider collaboration can help enable high performance by improving margins, reducing operating costs and improving customer relations while increasing market share.

Accenture provides an innovative approach that is based on data-driven solutions as well as extensive subject matter and project management experience. We help organizations implement policy changes, process flow, training enhancements, and technology modifications. Our approach is customized for market and scope, and can focus on administrative, infrastructure and/or clinical issues.

**While collaboration may start in an area such as revenue cycle, many opportunities for improvement exist, including:**

- **Revenue cycle:** Accenture helps payers and providers collaborate on revenue cycle issues, with the goals of reducing claim denials, improving cash flow, enhancing provider and member satisfaction, increasing first-pass rates, reducing call volumes, and lowering claims processing costs.
- **Provider portals:** We help design, build and implement collaborative portals to enhance communication and reduce transaction costs. Portals provide a self-service model for eligibility and benefits, claims status, electronic health records, clearing-houses, and formulary management.
- **Care management:** Accenture assists clients in developing collaborative medical management techniques to help reduce clinical appeals, medical expenses and premiums. This supports population health management and "pay for performance" systems tied to quality outcomes.
- **Accounts receivable/incurred but not reported (IBNR):** We have extensive experience in reviewing administrative appeals and denials,

identifying problem trends with claims submission, and helping clients achieve real-time claims adjudication.

- **Contract management:** Accenture helps facilitate contract negotiations, establish contract terms and conditions, and implement systems and processes for payment verification.
- **Information systems/HIPAA:** We help clients leverage regulatory requirements to improve transaction efficiency and achieve real-time claims submission and adjudication. We have experience with standard code sets, provider dashboards, and enterprise applications.

Our experience has shown that effective relationships can be developed anywhere, at any time and with results that can deliver high performance for all parties involved. All that is required are payers and providers who are willing to work collaboratively, through forward-thinking leadership and recognition of common market pressures and mutual opportunities.

### About Accenture's Health & Life Sciences Group
