

HEALTHTECH INNOVATION CHALLENGE-WE CAN CHANGE THE WORLD

VIDEO TRANSCRIPT

I think the quality of the startup that we've seen and has been fantastic the positive enthusiasm that are soon from these fantastic teams are presented today has been remarkable overall it is positively positive to see so many people wanting to do to make a change in healthcare I think there's a passion in this industry which means that people are interested in seeing how technology can help them improve there are so many people wanting to do to make a change in healthcare I think there's a passion in this industry which means that people are interested in seeing how technology can help them improve there are so many needs in healthcare so many needs to assure that patients really get better outcomes in that they get the kind of treatment that really is taking into account their individual and personal needs I think our clients are excited because in many aspects their innovation agendas are really on the rise I think we're at a unique time to bring innovation to our clients there's so much change happening in the industry the intersection of health technology our life sciences clients health care is got to fundamentally change its business model over the next 10 years and I think startups want to be of a big part of driving that approach innovation from the startup community I think is a well it's freedom really it has no boundaries having a

platform and an opportunity to share with large organizations what you're doing is really powerful and important so it was a great opportunity when you can interact with other innovators in science and health the judges were great they were very thoughtful in their responses and asked many great questions I love to the need to collaborate actually with a broader ecosystem without fears actually with a technology partners like Accenture and with the innovators like Stoppers I've referred the time and it's amazing it just shows the power of Accenture to kind of globally collect the best ideas around the world and bring them together and one of them and there's a huge amount of developments and often untapped and if we work as a big community to make that happen that will we want to change the way the world works and lives you.
