High performance. Delivered.

Mobilizing and accelerating Workday change management activities to enable better user experiences and allow faster results

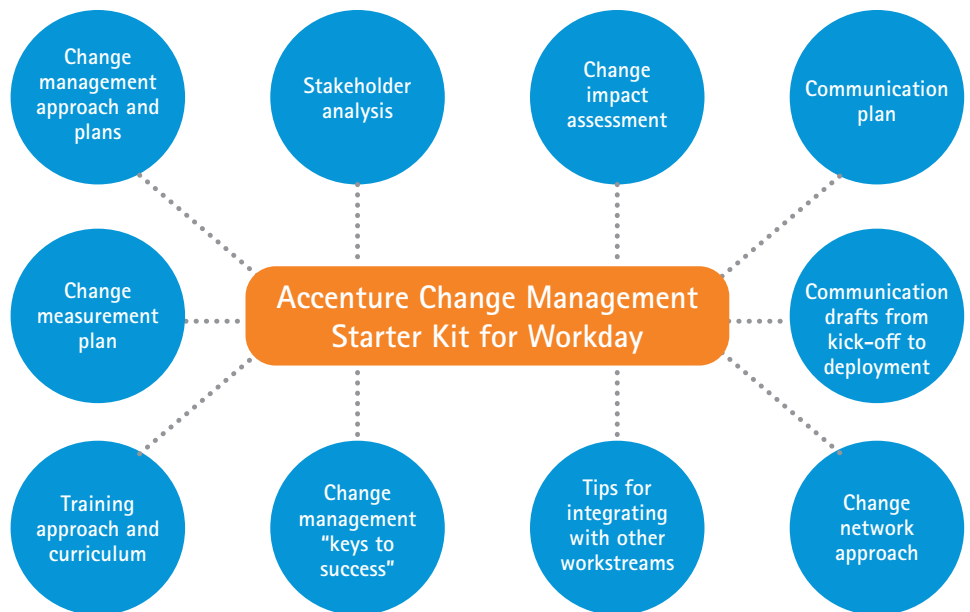

Companies that are preparing to implement Workday are understandably excited by the changes that lie ahead and are eager to have their employees take advantage of the user-friendly technologies and processes that Workday introduces. Yet, a number of those companies are unsure of how to proceed. Many—especially those that have never deployed a software-as-a-service (SaaS) product before—simply don't know how to harness their excitement, manage expectations, help drive user adoption, and create the Workday-ready environment they require. Accenture is here to help.

The Accenture Change Management Starter Kit for Workday takes the guesswork out of change management. It contains leading practices, thought leadership, and a number of "out of the box" Workday templates designed to help accelerate the planning and development of a holistic and effective change management program. Its components help companies address nearly all of their change management requirements—from stakeholder management and communications to training, change measurement and deployment support.

The Accenture Change Management Starter Kit for Workday can be used with the Workday Adoption Kit. It brings a more comprehensive and highly relevant set of templates and thought leadership, plus it offers access to more than 150 deliverables. Proprietary assets include:
