

# MEET KELLY

My journey into nuclear power actually started all the way back in high school. When I was looking at different colleges, I was fortunate enough to be accepted into the naval academy.

## MEET KELLY

Then I went through hands on training to learn how to operate a nuclear reactor, and I went on to serve for two years on board an aircraft carrier.

The aircraft carrier has 6,000 people on board and each of them has a really unique role and unique expertise.

Accenture operates in a very similar way. With all of the diverse backgrounds and skillsets that its employees bring to help make the project successful.

A lot of our clients are traditional utilities and power generation providers. So I think what Accenture brings to the table is a fresh perspective about how to integrate technology.

That's where my special background comes into play. There's not many people that actually have hands-on experience working with a nuclear reactor.

I'm able to translate the important aspects of nuclear power and help navigate how to apply the technologies that Accenture uses specifically into our nuclear power clients' operations.

My name is Kelly Jones and I am an industry consultant at Accenture.

Some skills don't turn up on a resume.
