

JONATHAN GRAVITY DEFIER MATHS MIND

Tell us about yourself

My name is Jonathan. I work in data analytics part of Accenture in Accenture Digital. In my space time I enjoy breakdancing.

Do you think breakdancing has helped you at work?

So in breakdancing you learn a basic move and then progress to a harder move that builds on what you've learn and likewise in my role in Accenture. It's always about learning, progressing and skill building.

Did you ever think you'd work at Accenture?

I never thought I'd go into consulting or commercial kind of role and the fact that I could merge my math background into Accenture is something that was quite amasing. Something that I didn't really realise when I was a grad, you don't get job titles using mathematician in a way say you got job title saying engineer for example or marketing officer. I encourage people from science degrees especially that they don't have to stick to science and they don't have to stick to academia but they can consider consulting or commerce of business.

What's your favourite part of working at Accenture?

I really enjoy the network and support that Accenture provides. And the fact that you can work in so many different areas and have so many experiences across a range of industries and a range of clients.

Do you feel like you make a difference at work?

I see a lot of potential in the world where things can be better. I volunteered for a program where we could get some kids in from rural schools and they were learning how to write resume and how to interview. It make an impact in the way that they can present themselves.

How does working at Accenture allow you to be yourself?

Accenture provides a lot of opportunities and it's very supportive if you want to go on volunteer for something. Or if you are trying to shape your career in a certain way and it's all about putting yourself out there and taking those opportunities when you see them.

Be Yourself, Make a Difference
