

NATHALIE MUSIC LOVER DATA DECODER

Tell us about yourself

I have a background in computational biophysics and currently I am in software engineering and we're using the latest technology to advance data analytics. I've always love music, my parents instill the love in music in us and I started learning how to play guitar.

How does your passion for music help you in the workplace?

Listening to music really helps me focus on my work. I can get in to the zone and helps me think creatively, I can think about different ways to implement what I'm working on.

How do you make a difference through your work?

A tangible outcome would be using that analytical capability to predict when you might see a trend in the software that we're analysing.

What attracted you to Accenture?

I knew that Accenture was doing some great work in innovation, technology focusing on automation, robotics, data analytics,

these areas are sort of crossing over all kinds of boundaries in terms of fields that now give people an opportunity to develop really interesting products.

Tell us about Accenture's training and development

I think the training opportunities that provides learning opportunities, networking opportunities, that will all be really helpful in growing your career and also in developing yourself in an area that you are passionate about.

One piece of advice?

Don't assume that you're going to start working on one thing and one thing only. I would say be flexible and be open and be ready to meet a lot of new people.

Be yourself, Make a Difference
