

MEET ED: AN ANALYTICS GRADUATE AT ACCENTURE

VIDEO TRANSCRIPT

Hi, my name is Ed. I studied Math and Economics in Trinity and I'm an analytics analyst in Accenture. So right now I'm on the client team and just working with the client and working with my line manager from Accenture, but there are loads of other Accenture people have similar project there as well.

The client space for analytics, it ranges from life sciences to financial services and retail.

I went to some career events during college and I met a management consultant, he was a really interesting guy, he told about what he was doing, the people he was meeting and how much he was learning. I kind of wanted to work with people like him.

The skills that I bring to the role are my analytical skills, my logical thinking, my numerical skills and my coding experience. It's not a requirement for a huge technical knowledge. Like, even with no coding background you can still come in and if you're willing to learn, like, people are more than willing to help you.

Accenture set up a lot of training for new analysts. New tools that have been introduced too, in Accenture are some visual analytics tools such as Tableau, Qlikview and the more traditional coding tools such as Scala, Spark, Sas and Python.

Like, my most favorite thing about Accenture is the people. I find the analytics community within Accenture is really tight knit. Like, everyone's very familiar with each other.
