ACCENTURE INDUSTRY X.O

Video Transcript

Speaker 1 (Robert)

Accenture offers great possibilities to students with interesting projects of all shapes and sizes. The projects are based on real life needs and have real use cases behind them.

The most important trait that we are looking for in an intern is of course enthusiasm. We are looking for a certain willingness to learn and a certain willingness to grow but we will like to have a solid base to build upon.

As a mentor myself, I've gotten the opportunity to watch my intern's project unfold before my eyes. I loved watching his eagerness and his growing independence day by day.

As he got on with his project, I also got the opportunity to look at some new technologies, hence giving me the opportunity to learn something new myself as well.

Speaker 2 (Orsi)

During the internship at Accenture, I learned about new technologies, I improved my programming skills and met new people with similar interests.

The project I was assigned to gave me an opportunity to gain insight into electron microscopy. I was the only intern working on this project, but I managed to catch up pretty fast.

A real project means real responsibilities, so that we know what to expect from our future career.

The colleagues immediately treated me as one of their own. They helped a lot and made me feel like an important member of the team.

Speaker 3 (Vlad)

The internship was highly enjoyable because we were on a team project with serious hands-on experience.

The greatest part came when I could contribute to the software design decision making.

It was great to be a part of the daily meetings and constantly communicate with the team, so we can provide the best solution for a specific problem.

This is the first professional environment that I've been in and I can only express my satisfaction: it feels supporting, smart, secure and definitely not formal.
