

What it's Like Working in Analytics on Accenture's Graduate Programme

Video Transcript

00:02

Hi my name's Ed. I studied Maths and Economics in Trinity and I'm an Analytics Analyst in Accenture.

00:10

So, right now I'm on the client team and just

00:13

working with client and working with my line manager from Accenture but there

00:16

are loads of other Accenture people on a similar project there as well.

00:21

The client space for Analytics - it ranges from Life Sciences to Financial Services and Retail.

00:32

I went to some career events during college and I met a Management Consultant.

00:36

He was really interesting guy - he told me about what he was doing, the people

00:42

he was meeting and how much he was learning.

00:44

I kind of wanted to work with people like him.

00:49

The skills that I bring to the role are my analytical skills, my logical thinking,

00:54

my numerical skills and my coding experience.

01:00

It's not a requirement for a huge technical knowledge like even if with no coding background -

01:06

you can still come in, and if you're willing to learn - like people are more than willing to help you.

01:16

Accenture set up a lot of training for new Analysts.

01:20

The new tools that I've been introduced to in Accenture are some visual analytics tools such as Tableau,

01:27

Qlikview; and the more traditional coding tools such as SCALA, SPARK, SAS and Python.

01:39

Like my most favourite thing about Accenture is the people.

01:42

I find the Analytics community within Accenture is really tight-knit - like everyone's very familiar with each other
