

MEET OUR VIRTUAL BARTENDER SWIGGY.AI

VIDEO TRANSCRIPT

Welcome to the age of customer-facing AI. Meet Swiggy.ai, our virtual bartender. With her facial and optical character recognition abilities, she'll recognize you the next time you come.

Powered by incremental machine learning and a recommendation engine that will whip you up a personalized drink just the way you like it. Be it a Singapore Sling or a Virgin Mojito, or even a Sweet Sunrise. With her robotic arm and her predictive maintenance IoT sensors, she will always be there for you.

Her natural language processing will allow her to travel the world. Cheers. Sante. [foreign language 00:00:46] And with her AI-powered conversational chatbot, she'll be your new friend and she can tell jokes too.

Speaker 2:
How do you get a computer drunk? Give it a screenshot of tequila.

Speaker 1:
Cheers to the future of customer facing AI, with swiggy.ai.

I get to bring both types together: both mathematicians and statistically oriented people, and also project managers who're very detail oriented, but also creatives, because we're creating experiences and then testing them with customers, so makes for a fascinating workday.

I think what I love best about Accenture—and I do love a lot of it, I'm very glad I'm working for this amazing group—but what I love best is that there are a lot of companies that I know talk about diversity—Accenture really walks the talk. There are people who come from all different backgrounds, all different cultures, and very different ways of literally thinking and communicating, all of them working as a team to produce something really cool.

My one piece of career advice is be prepared to learn your entire career. In other words, if you don't have a hunger right now and a passion for learning new things, you'd better adopt one.
