

## ACCENTURE INDUSTRY X.0

### Video Transcript

#### Speaker 1 (Alexa)

Accenture caught my attention by offering many opportunities to work with new technologies, AI, robots and many more.

My internship experience was really fulfilling as I got a glimpse of the development process of an application. I consider Accenture being a fruitful environment for growth as my current project is raising many challenges.

I recently joined an educational program for girls with the purpose of teaching them how to build and program robots. I am looking forward for this experience.

#### Speaker 2 (Istvan)

My story with Accenture with participating in the scholarship program. It was about two years ago.

After it I joined the MES Academy, and we were able to learn how to make a factory fully automatic. I found myself joining the demo team where we made hardware and software to be presented to businesspeople at large conferences.

The most surprising thing for me at Accenture was that here you do not only develop software, but you can also develop yourself.
