# Virtual skill lab

## Enter the new simulation experience

### Test your skills in various disciplines

Integrate each producer into your supply chain and receive enough raw material before the timer runs out.

### Make strategic decisions

Contaminated raw material must be destroyed at disposal stations. Please make sure that they do not reach the manufacturing site.

### Develop smart solutions

Take two of each part from the receiving area. Subtract the FIRST from the SECOND and bring the result to the goods issue. Subtract then the SECOND from the FIRST and bring the result to the goods issue. Repeat the process for all pairs.

#### **New command: SUBTRACT**

With the command, subtract two parts from each other. To do this, use the intermediate storage. The part to the interim storage facility will not be removed.
