

V – VALUABLE DISRUPTION

VIDEO TRANSCRIPT

Onscreen copy:

Prepare for quantum or prepare to be overtaken.

Value for humanity

To solve the world's biggest problems

Want to do work like Carl?

VO:

The most amazing thing that I've done at Accenture is have the opportunity to run the first quantum experiment on a real quantum computer. The first quantum computing project that we've done is with a pharmaceutical company and we're helping them with the beginning of their drug discovery process. So, at the beginning of that process, you have to do a lot of computational-intensive work and we're applying quantum computing techniques to help them create new drugs which will eventually help solve a lot of diseases. There are opportunities to solve some of the biggest problems that we face, such as ozone depletion or cures for cancer and others types of diseases. I'd love to see a lot of things solved as we continue to grow our quantum capabilities.
