

High-velocity Enterprise

High performance. Delivered.

Video Transcript

Terri Strauss,
Global Oracle Business Lead

The speed of technology change is pushing every company to rethink the role of their enterprise systems.

They are asking important and fundamental questions:

- What applications do we need to thrive in a non-stop digital world?
- How can we make our application portfolio leaner and more agile?
- How can we continue to drive returns from existing technology investments?

Accenture helps organizations accelerate the next wave of digital transformation.

We help companies embrace digital disruption and become a high velocity enterprise—agile, connected and optimized—and outperform the competition.

The key is to combine your existing enterprise systems with emerging technologies in an integrated and coordinated way that builds on your investments, assets and skills, while

harnessing the power of digital to become faster, more responsive and more proactive.

We've developed a five-phased comprehensive approach to help our clients become a high-velocity enterprise with Oracle solutions.

As a first step, we help clients define their digital journey based on an Oracle application and technology foundation so they can achieve the value and benefits from digital adoption.

Cloud is the foundation for this digital transformation—so as a next step, we help your organization move to the cloud at speed. Through the Accenture Oracle Business Group, we offer a suite of pre-integrated industry-based cloud solutions, accelerators, assets and tools that are designed to help enterprises deploy digital solutions quickly and predictably.

From there, the third phase is all about extending critical core Oracle applications by adopting digital solutions at low and predictable cost with real-time, actionable business insights that can be accessed and acted on anytime and anywhere.

In the fourth phase, we discover ways to run Oracle applications more efficiently—mining for additional value, incorporating digital solutions and further optimizing resources to perform more value-added activities. This phase emphasizes continuous improvement, introduction of new ideas and assets through the lifecycle of the support contract.

And finally, in the fifth phase, we help clients make the most of Oracle Technology—middleware, database and infrastructure—by turbo charging their applications.

Our solutions are built on the Accenture Foundation Platform for Oracle, which is being used by more than 330 companies around the world to connect on-premises and cloud applications, regardless of the technology involved—and create a secure path to the cloud.

So no matter where you are in your digital journey, Accenture can help you take advantage of this digital disruption—and become a high-velocity enterprise.
