Accenture’s Patient and Consumer Safety team provides comprehensive safety solutions to companies manufacturing tobacco products and are aligned to the newer regulatory expectations and more proactive consumer reporting. Risks associated with tobacco-use are a public health concern. Tobacco use is the single largest preventable cause of disease and death in many developed and developing countries. Tobacco industry is heavily investing in research and innovation and much of this is dedicated to the development of next generation products, such as e-cigarettes and Modified Risk Tobacco product (MRTP). Regulatory Authorities continue to enforce stricter regulations for the tobacco product industry. The aim of tobacco products safety and vigilance is to benefit not only individual smokers, but the health of the population as a whole.

Accenture is committed to help companies achieve best in industry safety capabilities through innovation, automation, analytics, quality and strategic safety solutions for better patient and consumer outcomes.

Accenture’s Pharmacovigilance team provides comprehensive safety solutions to Pharmaceutical companies manufacturing Veterinary medicines and Animal Health Products. The global veterinary drugs market is growing at a rapid rate and this growth directly corresponds to increasing demand for Pharmacovigilance reporting. Guidelines and regulations for veterinary products are as elaborate as that for human medicines, with requirements for expedited reporting, aggregate reporting and management of signals. After emerging as industry leader in Pharmacovigilance service delivery, Accenture is now on the forefront of delivering Animal Safety services.

Accenture is committed to help companies achieve best in industry safety capabilities through innovation, automation, analytics, quality and strategic safety solutions for better patient and consumer outcomes. Accenture continues to make significant investments in Intelligent Patient Safety Operations through technology and automation and is first in the industry to integrate Robotic Process Automation to safety processes. The current processes ensure scalability and flexible adaptation to increasing volumes or diverse case types and formats.
