

# MEET THE MINDS. SUMAYYA KHAN

## VIDEO TRANSCRIPT

Hi, my name is Sumayya, I am a technology architecture analyst. I deliver and design IT solutions for cloud-based applications.

I have an adaptive mind-set, and for me that means I'm able to take some of my skills that I have from before and use them somewhere else.

I think when you're at university you don't exactly know what you want to go into, so it's nice to come into Accenture and you have that opportunity to do different things.

A good way to work in Accenture is to work collaboratively, and that's what we did by working with Accent On Gender. We tried to portray the message of what it is to be a Muslim woman. We have all these female role models, it's useful to see who we have in Accenture and showcase those.

So when you're moving from a project to a project, you might have a gap in between and sometimes you can use that to think about where you want to go next, what kind of roles you want to apply to, but also what kind of skills they need so that's where your training comes in.

You always meet someone new, you always get the opportunity to learn something, it's just a nice environment to be in.
