

INDUSTRY X.0 INNOVATION CENTRE SMART FACTORY AT THE AMRC OVERVIEW

VIDEO TRANSCRIPT

Nigel Stacey: In 2017, the UK government commissioned the 'Make Smarter' report to look into the impact of digital within the world of manufacturing and supply chain.

I'm stood here today in the Advanced Manufacturing Research Centre, in Sheffield, which is at the heart of that digital manufacturing revolution.

We partnered with the AMRC as part of our Industry X.0 business to research what the factory of the future could look like and to work with our clients in making their digital transformation programmes become a reality.

Jonathan Bray: The University of Sheffield's AMRC, with Accenture, are taking invention through innovation to industry by leveraging the smart factory.

It's great to have Accenture here as part of our key partners at the AMRC.

Victoria Scott: By developing the Smart Factory Accenture, with the AMRC, will provide a digital test bed for our cyber-physical projects. This will allow us to not only develop technical solutions for manufacturing but also now demonstrate the integration of the technologies into our facilities. De-risking the entire process significantly and most importantly reducing the lead time to point-of-benefit.

Mark Walton-Hayfield: As you can see this is a fantastic environment to come and understand how digital solutions can be applied to engineering, to manufacturing and service operations in a risk free, relevant and engaging way.

On a typical visit we'll follow the life of a part around the factory floor. Exploring the various cells and how these solutions can be applied. We'll explain how the smart factory is creating data that forms a digital thread.

Following an inspirational Smart Factory tour, we can deep dive into specific challenges you might have, and we can start to create roadmaps, strategies and business cases that address those problems.

Our sandpit environment and combined team are here to help you launch projects and scale them faster than ever.

We look forward to seeing you here at the AMRC.
