Faster time to market. Reinvented customer experiences. Up to 30% higher productivity. Unlock value for your organization with Guidewire and Accenture.

Accenture is a trusted integration, implementation and support partner for Guidewire InsuranceSuite™, a leading insurance software suite. As a Select member of the Guidewire PartnerConnect™ Consulting global network, Accenture has delivered more than 500,000 hours of Guidewire services to leading carriers around the world.
Transforming with Guidewire

Accenture brings the best of our industry experience to help organizations with their entire transformational journey.

**SHAPE.** E2E vision & business case  
**DESIGN.** (Pre-)inception, feature / US analysis  
**BUILD.** Configure, integrate, legacy  
**TEST.** System / E2E / UAT test, test automation  

**MIGRATE.** At renewal / big bang  
**RUN.** App dev / maintenance, upgrade  
**CLOUD.** Hosting, cloud migration, run

---

**Client Experience in Action:**

**Digital Front Ends**

Accenture is helping insurance clients worldwide to transform their customers’ experience, enable new channels and provide hyper personalized offerings by implementing digital front ends such as Guidewire Producer Engage and Guidewire Customer Engage. With three active Guidewire Digital Portals projects ongoing, Accenture is rapidly growing skills, developing digital accelerators and helping insurance clients leverage the power of their Guidewire platforms.

**Journey to the Cloud**

Accenture is a market leading Cloud Service Provider and has unparalleled breadth and depth of talent in our Amazon Web Services Business Group. Our Guidewire practice is capitalizing on these cloud capabilities, to help our insurance clients move from on premise core insurance applications to core platforms in the cloud. To support these efforts, Accenture has built a cloud reference architecture and a Cloud Readiness Assessment Framework which helps to assess an insurer’s state of readiness and defines a plan to bridge any gaps before migration to the cloud.

Accenture has developed an integration with InsurTech partner SHIFT for real time AI powered Fraud detection during claims creation and assessment. Integration is real-time using API and data are mapped back into the Guidewire data model.

Accenture has developed a reference implementation Usage Based Insurance provider Xtract to automatically create eFNOL if an accident is detected.

Accenture has integrated Guidewire with AI powered document digitization (ICR SaaS) to automate claim creation and handling based on a European Accident Form and car claims eligibility related data. Integration is real-time using API and data are mapped back into the Guidewire data model.

- This helps identify potential fraud claims (real time fraud scoring) at an early stage allowing smarter claims eligibility decision and reducing claims losses
- Ability to bring new offering to market based on integration with connected devices
- Reduce claims resolution lifecycle time
- Automate data entry in back office (10 seconds for a car claims creation instead of 10 minutes), automate claims processing (with up to 99.5% accuracy in claims eligibility related data)
- Enhanced digital user experience

### INNOVATION ASSETS

</thead>
</table>
| **Automated Technical Monitoring** | This asset automates batch and message queue monitoring, providing an intuitive dashboard that enables reporting and viewing history data. It also provides a log file analysis which makes analysis of error logs easier. Integration with email enables real time notification of failures. | • Faster notification of failures  
• Error logs made more easily retrievable |
| **Accenture Delivery Methods for Guidewire** | Accenture’s renowned delivery methods and estimating tools customized for Guidewire. | • Estimated 10% reduction in overall Guidewire delivery lifecycle and faster time to market |
| **myWizard** | Accenture’s myWizard Intelligent Automation platform transforms the Guidewire support & maintenance projects by bringing in a set of automation and artificial intelligence tools to drive cost optimization, reduce operational spend, increase standardization, and process automation. | For Incident Management it provides:  
• Deep-dive incident analytics and predictive analytics to provide various trends  
• Automated monitoring including auto detect production failures  
For Problem Management:  
• Intelligent Opportunity Miner which gives a view on repetitive tickets and identifies the best candidates for problem resolution. |

**Knowledge Transition**

- New joiner packs
- Application training materials
- Due diligence, KT questionnaires
- Accentyre GW competency framework
- Data migration framework
- Version upgrade analysis
- GW Competency evaluation questionnaires

**Inception/Plan Analysis**

- Conceptual sprint plan for BC, PC and CC
- GW reference product backlog
- Accenture high performance business pack
- GW online, bch and print architecture
- Accenture change management methods
- Agile delivery school
- ADM estimator and methodology

**Sprint Build**

- Guidewire best practices
- Guidewire ClaimCenter workers compensation test pack
- Guidewire PolicyCenter workers compensation test pack
- DevOps for GW
- Straight thru claims processing
- Insurtech Partner Integration for Fraud Detection
- HO Pack Installation Accelerator

**Stabilize (SIT/E2E)**

- Guidewire PolicyCenter test suite
- Guidewire ClaimCenter test suite
- Guidewire PolicyCenter test pack
- Guidewire ClaimCenter test pack
- Guidewire BillingCenter test suite
- Guidewire portals test suite
- Selenium reference implementation
- TOSCA reference implementation

**Support & Maintenance**

- Guidewire claims WC—ticket analysis—heat map
- Guidewire event messages—service improvements
- Guidewire event messages—resolution guides
- Guidewire application maintenance process guide
- Insurance industry test pack
- myWizard intelligence technology platform
- Jump start kit for new joiners
- End to end technical monitoring

- Standard assets  
- Guidewire specific assets  
- Guidewire specific assets for client
