MICROSOFT TEAMS IGNITES A COMMUNICATIONS REVOLUTION AT ACCENTURE

VIDEO TRANSCRIPT

Accenture is a leading professional services and technology company operating at the intersection of business and technology. We operate with a half million people across 40 different industries and 120 different countries.

Our clients expect us to be an example, to be a beacon for how you address the challenges of today. So whether that means operating in a multi-cloud, hybrid cloud environment, whether that’s staying ahead of the threat landscape from a security perspective, whether that means enabling people with the productivity tools that they need to be successful in the work that they do for our clients… These things are all challenges that Microsoft helps us provide solutions for.

Our clients expect that we’re always, not just up with the game, but we’re ahead of that game. And so, for us, an example of something we really care deeply about is making sure that our people have the most frictionless way to operate and collaborate. And using the tools that Microsoft provides allows us to keep up with that and address that challenge every single day.

Quite simply—Accenture runs on Microsoft.

Whether it’s Windows 10 across our entire fleet, InTune to manage those devices, Office 365 for productivity, the Power Platform to bring data insights and integrations right to the hands of our business users, and most importantly, Microsoft Teams.

What I’m most excited about is Microsoft Teams.

Microsoft Teams allows our people to collaborate, create, and share with their colleagues, with our partners, vendors, and most importantly, with our clients. Quite simply, Microsoft Teams enables us to do things we never imagined we could do before.
