

High performance. Delivered.

Connected Industrial Workforce Video Transcript

Imagine the Industrial enterprise populated not by humans wielding tools, but by robots with human supervisors...

Working together, enabled by digital technologies in a two-way exchange, they are reinventing the production and service processes by which manufacturing outcomes are achieved.

This is the Connected Industrial Workforce. By enabling an adaptable, change-ready and responsive working environment, it promises to transform productivity, operational efficiency, and safety and risk management.

85% of manufacturing companies expect such environments to be commonplace by 2020... but only 22% are investing in them with confidence.

Not so the leaders. They spend almost twice as much as laggards on implementing the Connected Industrial Workforce.

Investing in Cobots and smart devices...

Upgrading their IT infrastructure to enhance data and system security...

And hiring, training and reskilling to close the digital skills gap.

In 2020, the Connected Industrial Workforce could be helping to unlock as much as €500 million in profitability for an automotive manufacturer with annual revenues of €50 billion.

Explore how the Connected Industrial Workforce could transform your manufacturing... Download our report **Machine dreams: making the most of the Connected Industrial Workforce**.
