

ACCENTURE OT CYBER FUSION CENTER INTERMISSION

VIDEO TRANSCRIPT

Howdy. I'm Jim Guinn with Accenture. My responsibilities include looking after our cybersecurity business for our industry groups, as well as our operational technology security for many of our clients in the critical infrastructure domain. Oftentimes we feel the best kept secret in our OT capabilities is our OT Cyber Fusion Center located here in downtown Houston, Texas. This facility came online last year, just as we all had to hunker down due to the global pandemic. However, demand for OT cybersecurity across critical assets has only grown since then. With recent breaches, such as solar winds, our clients have demanded their teams take a deeper look into the systems and assets that automate much of their production, including cyber resilience.

In March of 2020, we began teaming with our Alliance partners, manufacturers and most important our clients on specific operational technology cybersecurity use cases tailored to meet their needs across the critical infrastructure industries, such as healthcare, energy, and utilities, just as examples. Today, we're able to test our client's equipment across the globe where this OT Cyber Fusion Center is the hub for all of our OT cyber ranges in the world. We have the ability to test configurations in a safe live fire OT cyber range for the most resilient architectures, leveraging our OT asset testing, our OT threat intelligence, our OT incident response and our OT innovation team. Bringing the best thinking we have to offer alongside our

security alliance partners, helping our clients achieve their cyber security goals.

This OT Cyber Fusion Center is completely stocked with specific industry endpoints and devices intergraded with the leading cyber security tools to perform testing and deployment for solutions such as IOT edge into the cloud, PLC's out in the field equipment that brings the needed energy to market to power the world. As well as OT enabled fusion pumps for hospitals treating patients.

I am personally humbled by what this amazing team has accomplished for our clients, so please take a moment to watch this quick video, about leveraging the OT Cyber Fusion Center's resources to scope out the right OT resilient solution for your organization.

What's next for our OT cyber team? We are clearly going to cover more industries in the critical infrastructure domain, including defense, life sciences and manufacturing, which are already underway. Based on the increased demand from our clients, we are iterating on our newly formed OT MDR that cover the cyber needs of the operations teams, no matter where the SOC is located.

I challenge you to think about a pressing OT security concern in your organization, and then let us collaborate with you to solve it, jointly. I trust you will be blown away, as many of our

clients are, with our innovations in this amazing facility. Please reach out for a virtual tour at any time, because we're always ready to help. Thank you.
