

TREND VIDEO – MIRRORED WORLD

VIDEO TRANSCRIPT

Digital twins – simulations of real world systems – are driving the birth of the mirrored world. Now leaders can create massive networks of intelligent twins, creating a virtual model that looks far beyond the factory... into product lifecycles... supply chains... even ports and cities... allowing leaders to Optimize operations, detect and predict anomalies, prevent unplanned downtime, enable great autonomy. Intelligent twins allow strategies to be adjusted with every new piece of data, vital for creating and managing a new vision for the future.
