

FUTURE-PROOF, NEXT-GEN CAPITAL MARKETS ORGANIZATIONS WITH ACCENTURE APPLIED TECHNOLOGY AND OPERATIONS FOR MARKETS

TRANSCRIPT

Corporate and Investment Banking is at a turning point. The pressure to manage costs remains a constant, but the opportunities for banks that can meet ever increasing client expectations with an agile business offering are clear. A new operating model leveraging services based on next generation technologies such as cloud and AI will therefore be a key to success.

Combining our deep knowledge of capital market processes, industry insights, technology experience and network of alliances, Accenture Applied Technology and Operations for Markets can help our clients achieve this success. It offers a broad range of capabilities in front to back office technology and operations processing that clients can choose from depending on their needs.

This solution empowers trading and treasury entities with such services as trading platforms as a service, transaction processing across all asset classes, regulatory reporting, Know Your Customer and Anti-Money Laundering services and data management.

Statement Tom Syrett:

In our vision for Capital Markets 2025, we explain how the rebound of 2020 offers an opportunity for the industry to invest in new technologies and ways of working. With this service, we help our clients be ready for the market of tomorrow leveraging both those new technologies and intelligent operations to bring agility and future-proof their business for the years to come.

Accenture Applied Technology and Operations for Markets brings together our leading position in providing front-to-back technology platforms, our experience in offering processing capabilities at scale, and our collective investments in cloud, DevOps, Applied Intelligence and Data Analytics.

Accenture can help you focus on what differentiates you in the market, whether you leverage our solution for specific business functions, a technology renewal or your existing architecture.
