Accenture Thailand's Advanced Technology Center
video transcript

Hello. My name is Nitinant Somboonvit. You can call me "Pin". I am a Managing Director of Accenture Technology at Accenture in Thailand.

ATC stands for Advanced Technology Center which is basically a technology and innovation center. There are currently about 50 of these Centers located in different countries around the world.

With our people's potential, advanced technology, and opportunity to expand the market in Thailand and this region, we initiated a project to branch out the technology and innovation Center in Thailand.

This project gathers knowledge, experiences, ideas from technology and innovation centers around the world. We aspire to create a better society for us to live in, together with our technology specialists. ATCT works hand in hand with Accenture in Thailand. Our clients will be of Accenture Thailand's.

Our work with clients often revolves around new technologies, such as mobile applications, web applications, Web services, DevOps, and security.

The Center is designed and built to develop and upskill our people and enhance business value for our clients in Thailand. We also aspire to expand our growth to support other brands throughout the Southeast Asia region.

We are looking for talents with technology background and are keen to learn more through training.

Talents with a high sense of responsibility, a good team player, eager to develop themselves, and want to become a technology specialist.

ATCT supports remote working and especially during the Covid-19 situation, we highly encourage our employees to work from home. You might be worried that working from home is not effective when working as a team. But don't be worried,
we have designated Team Lead to guide and train you.

At Accenture, we focus on providing you the flexibility to work from home or anywhere else in a team. You will be expected to work on an actual project and develop your capabilities and skills from our training. These developments will help you build your career as a technology specialist and allow you to work on specific projects.

Basic English speaking and listening skills are required for language skills, but we do not expect you to give a presentation in English very fluently from day one. Language is one of the training courses we will provide when you come and work at the Center.

I am sure that you will learn and develop yourself a lot here. We are looking for people who want to improve and allow themselves to learn new things and work with Accenture and ATC networks worldwide as one company.

So, I want you to give yourself a shot and become a part of ATC.

We cannot wait to meet you guys and work with you.
