

AGXELERATOR – 2021 ECO INNOVATION CHALLENGE WINNER

VIDEO TRANSCRIPT

Traditional farming methods are a major contributor to the climate crisis. Overproduction, waste, food, and energy.

Controlled environment, agriculture offers a green alternative, but even new approaches still face the complexity of balancing supply with fluctuating demand. Big challenges with the solution in a very small.

Using the power of quantum computing, our smart growth calculator gives unprecedented insights, enabling farmers to control the speed at which plants grow to meet the optimal balance between harvest forecasting and customer demand. Cutting food waste, saving energy.

Welcome to farming's quantum future.
