

Deniz DTD Script

Hi, my name is Deniz, and I'm on an Accenture graduate programme for software engineering. My current title at Accenture is a Senior Application Development Analyst. As part of the Software Engineering Graduate programme I can essentially work in any phase of the software development lifecycle so it can be from analysis to deployment anywhere.

But most recently, my roles have been more to do with deployment and planning deployment at various sites for the clients. In my most recent project, I worked for a major high street retailer, they were in the telecommunications business.

Their business systems needed badly to be updated. It was very slow and old looking, but also it didn't have capabilities for customer relationship management. So, we have implemented AWS cloud for them to manage their data, analyse it and manage their customer relationships effectively in the most modern ways.

This project was quite stressful, but the change that we brought to their stores was also huge, and it was really, really good to be a part of it. Today, I am able to go to that store and say, OK, I have made this essentially.
