

INTELLIGENT FLEET MANAGEMENT FOR MICROSOFT

VIDEO TRANSCRIPT

Whether moving people or moving goods, the journey matters just as much as the destination. That's why you're always looking for ways to avoid breakdowns and delays, improve overall safety for drivers and passengers, anticipate changes and elevate quality, efficiency, and sustainability. But outdated systems, vehicles, devices, and processes can fall short. And the more your fleets expand, the more overwhelming it gets. Thankfully, Accenture simplifies fleet management across every step of the journey. Intelligent fleet management unifies vehicles, drivers, and operations to deliver real-time actionable insights the crusher fleets. It can help increase efficiency by optimizing vehicle use and improving order management and operational visibility. Improve productivity by feeling better driver performance, enhancing ad hoc order efficiency, and increasing free lifecycle. Lower downtime through predictive analytics to reduce unplanned maintenance, avoid delays and driver resale value. It can even help expand your revenue streams to opportunities such as pay-per-use, outcome-based revenues, commercialization of insights, and fleet management as a service. In addition, intelligent fleet management can help you operate more sustainably by uncovering opportunities to boost fuel economy, lower carbon emissions. With Accenture's intelligent fleet management, you get more than just a technology.

You get a proven partner committed to achieving your vision and accelerating digital transformation. And Accenture worked with you on a local level to get your global custom solution up and running. You also benefit from our rich partnership with Microsoft and the Microsoft Azure mobility platform that links existing and future assets for are truly open, scalable, and future ready solution. Plus Microsoft is committed to being carbon negative by 2030, helping you reduce your impact on the planet.
