

Work.com Sizzle Reel

Video transcript

COVID-19 has dramatically changed the way we live and work.

But now, we're striving to get back: back to the office, back in the classroom, back on the factory floor.

Knowing when and how to reopen is an unprecedented challenge for companies, and the constant changes from day-to-day create even more uncertainty.

When it IS safe to return to the workplace, how can you ensure your employees feel confident about returning to work in this new normal?

Accenture has partnered with Salesforce to help you every step of the way.

Return to Workplace is our new, comprehensive solution that combines Salesforce's Work.com suite of human-centric technology with the sensor-based automation of Accenture's Industry X.O Digital Worker Platform.

While all industries and geographies are affected differently, everyone faces a common set of challenges.

Our approach can help you PLAN a safe reopening, ENGAGE your employees and customers, REOPEN your new workspace and workday, and REINVENT your business to unlock new

digital opportunities that accelerate growth.

Both the public and private sector must keep in touch with their employees about their health.

The Return to Workplace solution provides a way forward to monitor the health status of your people, conduct formal contact tracing to understand peoples' relationships and interactions, facilitate requests for office entry, schedule shifts, or send digital "fast passes" to employees, control workplace density and flow, and drive preventive action to reduce risk and emergencies before they happen. All while capturing actionable data in real time so you can be more proactive, more predictive, and more prepared.

In a world where the only constant is change, we're here to give you the tools and confidence to move forward safely and reinvent your business in a hyper-digital world.
