

# YOUTHQUAKE MEETS GREEN ECONOMY | GREEN GOALS

## VIDEO TRANSCRIPT

### TEXT ON SCREEN:

77% of young people in Asia Pacific aspire to get a green job by 2030.

Do you also want to create a real impact through your career?

### MEET GEN Z

### MEET GEN GREEN

young people who want to solve the biggest environmental challenges  
young people who want to have “green-collared” jobs  
young people who want to do well by doing good

Here are our Accenture green champions...

Listen in as they talk about zero waste management.  
Listen in as they talk about ESG.  
Listen in as they talk about international environment standards.  
Listen in as they talk about carbon emission reduction.  
Listen in as they talk about virtual fundraisers.  
Listen in as they talk about sustainability.

**Wei Qi Tan Business Strategy Consultant, Accenture in Malaysia:** Sustainability is long-term. People tend to think that waste is just about a single bag of garbage—but there’s a whole value chain from consumption to disposal. How do I know this? Well, here I’m supporting one of the first sustainability projects in the Southeast Asian region. I built mad green skills by developing a national sustainability roadmap for a Southeast Asian country. Through interacting with influential stakeholders and global experts, I was able to expand my environmental strategy and waste management knowledge, and my techno-commercial analysis skills.

**Himanshoo Seth Technology Architecture Delivery Senior Manager, Accenture in India:** Sustainability is actionable. I’m able to link tech to real-world problems. Helping organizations make this world a better place is a massive motivator for me. Currently, I’m using my Salesforce Architecture skills to create tools that will help companies see previous and real-time ESG data. These tools help firms track, measure and act on green initiatives that will in turn drive positive change in the world.

**Rose Cañete Location Facilities Associate Manager, Accenture in the Philippines:** Sustainability is actionable. I’m able to link tech to real-world problems. Helping organizations make this world a better place is a massive motivator for me. Currently, I’m using my Salesforce Architecture skills to create tools that will help companies see previous and real-time ESG data. These tools help firms track, measure and act on green initiatives that will in turn drive positive change in the world.
