

High performance. Delivered.

## Continuous Delivery

### Video Transcript

#### Martin Croker, Global DevOps Lead

Today, to compete in a high-pace business world, companies have to be flexible—and adapt quickly.

Software is at the heart of nearly every business; and the ability to roll out enhanced business capabilities continuously is becoming the difference between companies that succeed and ones that stagnate.

To better meet these demands, Accenture helps companies continuously deliver software through our comprehensive services for DevOps, which span strategy, transformation, implementation and ongoing management.

Our consulting services start by assessing your current DevOps maturity we then create for you a strategic vision and roadmap that brings DevOps practices into your business in the way that is most suited to your business context.

As we focus on transformation, we work with you to establish the right governance model and manage cultural shifts while introducing greater automation, setting your teams up for enduring success.

Implementation is comprised of designing and building a tooling platform to support DevOps practices and create automated test suites.

Liquid Delivery concepts such as DevOps and Continuous Delivery benefit your business by reducing time to market (often from months to days), and improving the productivity of IT delivery.

Accenture can help you transform your IT department to be the powerhouse of innovation which accelerates you beyond your competitors.

The future of business is being written today by companies that understand the need to continuously innovate.

Join us on this journey.
