# Accenture's Approach to Delivering Pega Solutions

## Video Transcript

Hi, we're Accenture and we'd like to introduce you to Accenture's approach to delivering Pega solutions. In today's ever changing world organizations are finding that when creating software solutions, to ensure success, it's critical to use a tested standard approach as the foundation for implementation. That foundation is Accenture's approach to delivering Pega solutions. It's a tested methodology and standardized approach for the planning, development and delivery of software solutions across all industries.

Many organizations have had software solutions that didn't solve the business issues or address the challenges they encountered. The goal of Accenture's approach is to focus on your key business issues and align the right solutions for the challenges faced by your organization. So what are the key advantages of this approach? And what value will this provide for your organization? Relying on Accenture's approach for Pega we achieve faster delivery with an increase in the solution quality. The outcome is higher business value.

The amount of effort you have to put in is minimized, resulting in more time for you to focus on your core business. In addition, the solutions are reusable in other parts of your organization with minimal modifications. Whether your organization is using waterfall, agile or a custom methodology Accenture's delivery approach for Pega can be employed to ensure value throughout.

Accenture works closely with you to focus on creating a solution that meets your requirements and

ensures compliance. In order to deliver these robust solutions Accenture offers a critical mass of deeply skilled people, worldwide delivery centers and knowledge capital gained from our previous experiences.

So how do we create this value? Accenture works in smaller iterations to ensure that you are involved in each step of the process. Each iteration is comprised of five areas of focus, including meet, design, build, demonstrate and feedback. Each iteration has time built in to incorporate your feedback and address both defects and enhancements. By the end of each iteration Accenture has revisited your requirements and demonstrated that the application solution validates those requirements and ensures quality.

Another key benefit to your organization is that by using Accenture's approach risk and uncertainty is reduced. This is in contrast to the typical expensive and untested custom built solution. Accenture solutions rely on leveraging out-of-the-box functionality with minimal customizations.

This provided you a brief introduction to Accenture's approach to delivering Pega solutions but we'd appreciate the opportunity to discuss more.
