High performance. Delivered.

# R/Evolution in Federal Health

## Video Transcript

**Jim Traficant:**

“We’re in a once-in-a-generation transformation of an industry. It’s occurring right in front of us.”

“Families, and people, and our military who’s serving to protect all the freedoms that we enjoy, our veterans who have taken care of us. How do we take better care of them?”

“How do we create a sense of readiness and health so that we can defend the nation?”

“Federal healthcare is at the heart of where the transformation will occur.”

“We’re bringing healthcare to the consumer, to the patient, and not the other way around. We’re putting the consumer in the center. That’s where it becomes revolutionary. That’s where we can transform it.”

“We’re helping you achieve your goals for health, and then when you need healthcare, we’re providing the insights around that data to make the clinicians most effective, to get great and accurate diagnoses, and

accelerated health.”

“That requires better information, mobility, everything that Accenture does in multiple industries coming to converge around the consumer from home to the care facility, but in the course of their life.”

“I spent the majority of my career working in space-based applications, working on one of the great observatories that was launched by NASA. I’ve worked in the intelligence community. But my life changed when I got sick.”

"I've had two liver transplants ...

...The first transplant saved my life. The second one gave me my life back. And I've been on a mission ever since to help transform, create this revolution in healthcare...In the course of my treatment, I came to appreciate that healthcare has lots of data. What we were missing was information."

"... And I'm at Accenture because we're in a unique place to deliver the transformation that the nation's looking for, not only in the federal sector, but for all of our citizens."

"Accenture's vision for transforming healthcare and creating this revolution is insight-driven health, where we move from second opinions to the data informing what's the best treatment option, how do we keep you well in the first place, how do we manage health."

"My work here at Accenture in healthcare, and particularly Federal Health, is a passion. It's my life's calling. I've been at the brink of death three times ... and I've seen healthcare deeply, the best of it, and also some of its challenges. And I'm totally committed, and ... totally convinced that Accenture is part of the revolution required to transform this industry."
