

# SAP OIL AND GAS VIDEO SCRIPT

SAP and Accenture's 40+ year partnership is bringing digital transformation to the oil and gas industry.

Our collaboration began with the co-innovation of IS-Oil in the 1990s.

In 2014, we created the Accenture and SAP Business Solutions Group.

In 2016, we joined forces to accelerate the development of the new S/4HANA digital core...

...and now we are delivering the NEXT GENERATION of the SAP industry solutions for oil and gas on the S/4HANA platform co-developed by Accenture and SAP.

We have worked closely with oil and gas organizations to understand their challenges.

Cost control and outdated systems remain a top concern.

This is why we CO-INNOVATE, CO-DEVELOP AND CO-DELIVER new oil and gas solutions.

We are co-innovating to unlock greater value throughout the hydrocarbon value chain.

We are co-developing solutions built for SAP S/4HANA, bringing platform innovation and digitally connected processes.

Our co-delivery model helps control risk while accelerating implementation.

The next generation of the SAP industry solutions will help oil and gas companies unlock business benefits along the hydrocarbon value chain.

Upstream Production Operations enables complete visibility and transparency of costs, production, revenue, maintenance and EHS at the well-level on a single enterprise platform.

Connected Hydrocarbon Logistics improves visibility into inventory in real time, unlocking value across the hydrocarbon supply chain.

Connected Assets for Oil and Gas leverages SAP Leonardo to provide asset monitoring and advanced analytics.

The collaboration between Accenture and SAP is producing flexible, digitally powered capabilities at speed and scale.

Our joint innovation strategy is helping oil and gas companies navigate and accelerate their transformational journeys.
