

ACCENTURE CYBERSECURITY ENGINE

WHAT IS IT?

The **Accenture Cybersecurity Engine** (ACE) is a single, integrated suite of top-tier security solutions. It's sophisticated enough to connect, coordinate and accelerate all of your security operations efforts. And it's robust enough to help you protect even the most complex environments. Because it's pre-configured and cloud-based, you can plug your security operations center (SOC) directly into ACE, which includes all the processes and tools you'll need to take your SOC to the next level. ACE builds business resilience across the entire IT and OT security process library.

It exhibits an executive dashboard which provides key metrics, enabling security leadership to understand and manage the organisation's cyber-defence operations. ACE enables security teams to improve their operation with **faster response times and end-to-end visibility** across all machine data. Users also have the ability to investigate threats and incidents and conduct breach analysis with relative optimized incident response .

KEY FACTS

55

Average number of security tools businesses manage

No. 2

In 2017, cybercrime leapt to the second most reported economic crime ^[1]

29M

Records exposed in 858 publicized breaches during 2017 ^[2]

THE BENEFITS

- 1.** Improve security posture through **faster detection and response** to cyber security threats
- 2.** **Deploys 75% faster** than a traditional on-premise SIEM solution
- 3.** Satisfy compliance requirements related to **security monitoring and log management**
- 4.** Software-as-a-service allows security teams to **stay in control while minimizing infrastructure footprint** and capital costs
