BUILD PERVASIVE CYBER RESILIENCE NOW

Companies are racing into the digital future.

But many aren't prepared for the evolving cyber risks that come with a connected, data-driven future enterprise.

Cloud computing, the Internet of Things, and data sharing with partners, customers and other parties are introducing **deeper levels of connectivity**... and new entry points for attack.

Intelligent systems that use AI and large data sets are raising security and privacy risks.

And **autonomous machines and processes**, like self-directed robots and open APIs, always need sufficient levels of protection.

For CEOs of the future enterprise, managing risk starts with weaving cyber protection into everything you do. Here are five ways to build cyber resilience:

- **Make your business leaders Resilience Leaders**
- **Support the security leader as a trusted business enabler**
- **Make employees part of the solution**
- **Be an advocate for protecting customers**
- **Think beyond your enterprise to your ecosystem**
