

# ACCENTURE INNOVATION HUB SINGAPORE

**Reinventing possibilities  
with Industry X.0**

## **The Welcome to Accenture's Innovation Hub in Singapore.**

Our Innovation Hub focuses on asset-intensive companies in agriculture and forestry, mining as well as utilities, and chemicals and oil & gas.

We help our clients in this center address three things. The first, is the challenges that they face in the industry. Secondly, is the rapid pace of changes within their industry. And then thirdly, in delivering the ability for them to accelerate into the digital world. A world where everything is connected – what we call in Accenture – Industry X.0.

Let me now take you through some of the highlights of our Innovation Hub and show you how Industry X.0 is brought to life for our Resources clients.

The use cases are broken into three key areas. The first is Digital Supply Chain. The second is Connected Assets and the third is around Digital Talent.

In Digital Supply Chain, we have solutions that are based in blockchain for logistics. For example, they provide our clients with accountability, visibility, safeguarding their assets end-to-end.

In Digital Procurement, we have solutions that help our clients manage their spend, shape their sourcing as well as manage their digital aspirations.

In the area of Connected Assets, we have solutions around corrosion management that take data from both structured sources as well as unstructured sources such as video and images, combining them with advanced analytics and deep machine learning to transform the way we plan, maintain and execute - from presumptive and costly, to predictive and data-driven.

Our BB-09 solution for downstream aids in corrosion detection and enables corrective actions to be taken at the right place and the right time.

While BB-09 for upstream comprises of the Well Advisor and the Well Life Cycle Cost Applications, which allows users to analyze historical wells data, analyze the predicted cost variance, and compare cost variance simulations.

In the area of Digital Talent, augmented reality and virtual reality are used to create training and collaboration demonstrations; as well as simulations, that will equip and train operators in elements of safety as well as evacuation procedures.

These are just some of the assets that we've created in the Innovation Hub to demonstrate Industry X.0 in action.

In summary, the Accenture Innovation Hub in Singapore delivers innovation at pace and helps business leaders reimagine the work their people do in partnership with technology.

**This helps them:**

- attract and retain a solid workforce
- deliver value to stakeholders and shareholders, and
- improves productivity and cost efficiencies, two levers, which are huge in any resource company.

**So, what are you waiting for? Come experience breakthrough for yourself at the Innovation Hub. See you soon!**
