

# SAP LIQUID STUDIO FOR LEONARDO APPLICATION: TRAINING CENTER

Your digital training support assistant

Function: Training | Process: Human Resources | Industry: Cross-Industry

## Application Overview

Corporate training programs have a high level of complexity and can become difficult to manage at scale. The Training Center application is meant to serve as a tool for training coordinators to help them create, publish and manage external trainings. It also allows them to book seats for customers and prepare and follow the training sessions effectively.

This is all done from a user-friendly interface that takes advantage to SAP UI5 technology to bring a web-centric approach to training preparation.

## Solution

This SAP Cloud Platform-based application provides trainers and coordinators an overview of upcoming trainings, facilitates the booking process and reduces the manual work required during training preparation.

## Business Value

- Provides the ability to adopt the best practices of SAP Cloud Platform development when transferring the application to an one's own landscape.
- Efficiently manages the booking process and reduces the manual work required during training preparation.

## Features

- Integrates with SAP C4/HANA.
- Provides a calendar view with all scheduled trainings.
- Includes built-in functions to facilitate training preparation and closure.
- Incorporates a seat reservation process (for C4/HANA contacts).

## Technologies in Use

- SAP Cloud Platform
- SAP C4/HANA
- SAP Leonardo Analytics
