
HR Analytics: Financial Services Talent and Organization

VIDEO TRANSCRIPT

Accenture used HR data and analytics to help a global asset management firm boost productivity by 25 percent.

Until recently, HR data was used mainly to look backwards with a focus on the cost of people. Today, that's changed. We've built an expert analytics team in partnership with MIT and ESSEC that focuses on the value of people and increases the strategic value of HR.

We provide forward-looking insights that help reduce attrition, provide richer, personalized workplace experiences, enable better decisions to unlock the potential of tomorrow's workforce and, of course, reduce costs.

HR analytics from Accenture. Hard numbers, clear insights.
