

Accenture Runs on Microsoft

With nearly 460,000 people operating around the world, Accenture is one of the largest digital workforces on the planet. We use Microsoft technologies to power their experience every minute of every day – with productivity and collaboration tools that are engaging, mobile and secure.

Microsoft's platforms and cloud-based services are at the heart of our digital posture, and critical to our vision of leading in the New. We have a long and successful track record of teaming with Microsoft. From Skype, Teams and Office 365 to OneDrive for Business, Windows 10 and Azure -- Accenture runs on Microsoft.

As demand for flexibility, persistence and cross device consistency increase, newer capabilities like Microsoft Teams and Surface Hubs are becoming even more important in the mix. This is also happening with an increasingly flexible and secure set of capabilities powered by Intune.

Azure is critical to the operation of our services in the new. With nearly 95% our services now in the cloud, Azure is at the very center of the most critical production services – like SAP B/W on HANA and in powering the migration to the new S/4 HANA. Azure has demonstrated the scale, flexibility and performance we need to position us for future growth and financial transformation.

With Microsoft technologies at the core, Accenture strives to be the role model in communication and collaboration in the new.

We're poised for the future and believe we're at the leading edge of digital transformation for ourselves and our clients, powered by Microsoft Technologies.
