

Defence innovation: Leading in the New

The world around us is accelerating. Defending our nations is becoming more complex as the pace of change and diversity of threats continue to grow.

Fortunately, new technologies are fueling the next wave of mission capabilities, changing the way we live, work and defend our nations.

At Accenture, we are leading in the new: helping our clients get ahead of the decision loop of adversaries. By harnessing the power of disruption and innovation, we are able to deliver the solutions to accelerate advantage now, and ensure mission readiness.

Human-centered design is at the heart of all we do. Ensuring the solutions we deliver meet the real expectations of the men and women who depend on them. Today, through a virtual reality solution, we are enabling pilots to visualize, refine, brief and rehearse their combat missions before they strap into their jets.

It's an innovative approach that has transformed mission planning into an immersive multi-domain, multi-participant 3d environment. Today, we are automating intelligence for war fighters with video analytics and data fusion, extracting insights from multiple sources for a holistic operating picture.

Today we are shifting the cyber balance of power by helping our clients engage in the proactive defense measures needed to hunt, defend and outmaneuver adversaries.

Today, we are putting critical health insights into the hands of military leaders and power into the hands of soldiers through a precision health insight tool: a smart device that leverages analytics, big data and advanced

visualizations for a holistic view of both individual and unit readiness before deployment, providing an instant view of force readiness. Today, we are supporting defense personnel and their families to smoothly relocate and settle into a new posting, adopting user-centered design.

A personalized mobile tool guides personnel through the multitude of tasks associated with the new posting, ensuring they feel supported and informed about their relocation. Today, through the application of stated preference analytics across the workforce, we are helping to promote diverse, engaged armed forces by supporting a modern working environment in which personnel can flex their commitment in line with personal demands. Today we are supporting positive personalized engagement across the entire defense community.

With a digitally enabled smart portal, we are tailoring content and transactions to individual personnel, helping to make management of National Service and reservists commitments easier. We are bringing the power of Accenture's local and global community of experts in advanced technology, billions of dollars of investment in research and development, and strategic alliances and partnership together to serve our clients mission. Today we are leading in the new, harnessing the power of disruption and innovation, putting it to work to accelerate advantage now.
