

## **Accenture on SAP**

Running a business today demands...

Talent...

Resources...

Systems...

And above all,

Smarts!

Hi, I'm Dan Kirner of Accenture. And thanks to our long-running collaboration with SAP, Accenture's financial systems and technology rank among the smartest in the business world.

Accenture is growing ever larger. Our business operations are becoming more diverse. And our technology is digital everywhere. So we need the technology we use to be smarter than ever.

Which is why SAP S/4HANA and other SAP solutions are powering Accenture's intelligent enterprise today. SAP helps us deliver value and innovation across the enterprise by building insight, agility and efficiency into all aspects of our work.

Our technology architecture must support more sophisticated finance, HR and analytics capabilities, so that we can make smarter business decisions and evolve as the business world changes.

With our migration to SAP S/4 HANA, we are well on our way toward entering the new world of “intelligent finance.”

And it’s worth noting that we also migrated Accenture’s SAP Business Warehouse to SAP HANA in Microsoft Azure.

This double migration means we can run Accenture’s business in a smarter, more secure way, and support our evolving businesses with an intelligent, real-time finance capability.

Even better, Accenture can run smarter tomorrow, next week and next year, because SAP HANA is our flexible platform for the future.

Our SAP migration is the biggest change we have made to Accenture’s IT landscape in nearly 15 years.

Working in partnership with SAP has enabled Accenture to implement a world-class technology platform that will serve us well as we power Accenture’s intelligent enterprise.
