

# ACCENTURE CONNECTED PORTS

## VIDEO TRANSCRIPT

There is a domain that has been shrouded in mystery, one with a multitude of machinery and loosely connected systems.

Consider an ordinary port. Nothing unusual... until something catches your eye. This is Clanky, an important crane for unloading ship containers. Right now, however, Clanky seems to be stuck.

Now observe, as the unfortunate port operator scrambles to find out what the problem is. Numerous questions flood the operator's mind. Did any of Clanky's many components fail? Or is he stuck because a ship is late, or did a prime mover break down? Other equipment, parties, and systems all face similar situations. The operator doesn't just need answers; he needs them NOW. And WHERE is he going to get any of this information?

To avoid an operational bottleneck like this, a significant, innovative solution is needed. Or perhaps not. Unlock the potential with Accenture Connected Ports Solution

Accenture Connected Ports uses a combination of the latest, cutting-edge technology to turn your port into an integrated command centre - that can be accessed anywhere. Optimize your operations and equipment productivity, as well as enhance worker safety and wellbeing. We'll connect Clanky via IOT and PLC to detect equipment conditions and data connectivity in real-time. And if every single machinery could transmit this data – imagine how well you'd know your operations.

This allows operators to be kept in the know on everything – from which containers the various equipment are working on, how fast they're all moving, and their operational status.

With their schedules and activity logs within reach, you'll be able to spot problems before they happen.

Best of all, Accenture Connected Ports solution retrofits with your legacy systems making use for its source data while leaving the systems intact.

Channelling information into a central data pool, our solution will provide you with a single, highly organised source of truth.

Greater productivity and improved predictive maintenance capabilities - result in a more efficient reliable port. This attracts carriers to select the port as the carriers can transport the goods without delay. Accenture Connected Ports meets your needs today for agile operations and lays the foundation for a highly effective ecosystem platform.
