

# MEET OUR SAP EXPERTS

## VIDEO TRANSCRIPT

### **Angel Radcliffe, Architect Specialist**

My specialty is SAP, and I work to implement solutions within Finance and Accounting for our clients.

### **Daniel Lime, Architect Specialist**

I work with clients building out their systems and processes, which enable their business to work more efficiently.

### **Kathleen Brohl, Application Development Specialist**

My specialty is working with a client to implement SAP solutions.

### **WHAT DOES A TYPICAL DAY LOOK LIKE?**

**Angel:** I can be doing anything from technical to your functional role.

**Daniel:** My teams align to the client's team, making sure that we are all in sync about the key tasks that are coming up and the key milestones that we need to achieve.

**Kathleen:** Managing people – both Accenture and the client. There's training sessions, change management sessions and overall continuously building the relationship with the client.

### **WHAT ARE THE TRAINING AND DEVELOPMENT OPPORTUNITIES?**

**Angel:** The training opportunities are limitless. From having access to the learning hub where you can take courses to SAP certifications, to the SAP upskilling.

**Daniel:** After less than a year helping deliver a project as a consultant in Chicago, I got the opportunity to lead a follow-on project as a deployment lead in the UK. And I'm expecting to lead the next appointment in Hong Kong right after that.

### **WHAT DOES IT TAKE TO SUCCEED?**

**Angel:** You have to be adaptive to change. You have to be resilient.

**Daniel:** The first thing you need to do is build your network. Building your network is going to give you access to opportunities and valuable information and experience that you wouldn't have otherwise.
