

UNLOCKING CLARITY

VIDEO TRANSCRIPT

In any complex business, clarity is a precious commodity.

In a substation, it's critical.

Without visibility to make informed strategic decisions about reliability and asset performance, maintenance schedules can, at best, be estimated, and you're left to reactive when something goes wrong.

If out-of-the-box solutions don't meet your needs, or match your current organizational architecture, turn to Accenture.

Our Asset Performance Monitoring solution with smart algorithms, provides a "single pane of glass", offering a clear view of performance and ensuring your team can be proactive.

This "platform of platforms" works across various best-in-market solutions, consolidating asset data to provide real-time performance and operational insights across your entire portfolio of assets.

Now, you're able to leverage OT data to do alarm and event analysis for false positive identification. You can also build custom analytics to avoid upstream failures, by adding predictive capabilities to devices that don't have that functionality today.

Equipped with true clarity, you can focus on assessing the performance of assets to inform operations—providing situational intelligence to optimize maintenance schedules, reduce downtime, and prioritize investment.

Our asset performance monitoring solution has been deployed at multiple utilities and generated millions of dollars in savings. The solution is available today to help you to improve operational performance and increase reliability.
