

ADDITIVE MANUFACTURING AT INDUSTRY X INNOVATION CENTER TURIN

VIDEO TRANSCRIPT

The power of change continues to push what's possible for manufacturers to achieve.

New, edge solutions are helping to maximize 360° value, starting from product ideation.

One such solution is Additive Manufacturing. Additive Manufacturing leverages Design for Additive and Generative Design to start the production process from a 3D model, allowing product engineers to create new, non-intuitive shapes that improve product performance.

Advantages once unimaginable are now within reach: lower transportation and warehousing needs, a more resilient supply chain and greater sustainability.

Accenture can support your Additive Manufacturing journey, from product ideation up to delivery.

At our Industry X Innovation Center in Turin, we collaborate with Clients and ecosystem partners to co-create Additive Manufacturing solutions that can make a difference.

Together, we can help make a difference for you.
