Saga Natural Language Understanding Framework Animated Video

Have you spoken to your phone lately?

Ever find it frustrating when it can't understand complex questions?

Unfortunately, virtual assistants aren't powerful enough for sophisticated daily uses, let alone for deciphering complex business queries and documents.

For this, you need true Natural Language Understanding.

But enterprise NLU applications are expensive to develop, slow to launch and difficult to maintain.

That's why we created the Saga Natural Language Understanding Framework, or Saga for short.

Saga is a scalable, cost-efficient framework for developing a wide variety of natural language applications, from smart question/answer systems to compliance monitoring, contract analysis and other document understanding solutions.

Machine learning and knowledge graph ready, Saga is an easy to use NLU system for extracting valuable insights from unstructured data.

Get in touch to see how we can add value to your Natural Language Understanding use cases with Saga.
