

# THE INTELLIGENT AUTOMATION PLATFORM. POWERED BY THE CLOUD

## VIDEO TRANSCRIPT

Here is a quick guide to the Intelligent Automation Platform, powered by the cloud.

What makes it different?

It delivers automations faster. And it unlocks the value from legacy, enables cloud-driven transformation and unleashes human intelligence.

How? By combining the cloud with more intelligent automation.

It starts with a single building block. Each block delivers a part of an automated process, and they snap together to build an automation. Let's say it was using data to understand customer journeys. We just connect the blocks that read data from legacy systems, extract text from recorded calls and analyze handwritten documents.

Scaling it is simple, just add more blocks. It means automations are created way quicker and can expand rapidly. The key is smarter cloud. Production accelerators get automations to market over 50% faster. Infinite robot capacity means unlimited scalability, on-demand. And you can even pay by the second.

The Platform draws on the best of AWS. And a liquid infrastructure connects cloud automations to legacy systems. It draws legacy data and applies analytics, AI and machine learning, creating value

from legacy and feeding digital transformation.

What does this all mean? Automation can deliver the value of the cloud now.

And, the automation thinks for itself, with Intelligent Scheduling. Once automations are live, they constantly self-monitor demand levels, capacity and performance. And they upscale automatically when needed and downsize or auto-sleep when not. They can self diagnose and self-heal. And when automations are no longer needed, they dissolve.

The Intelligent Automation is an integral part of Accenture Cloud First, our global network of cloud specialists, services, innovation and partners, all driven to one end, to deliver cloud value faster, by increasing business agility and innovation, and reducing operational costs.

If you want cloud-powered automation faster, and need to monetise legacy, unleash human intelligence and accelerate their digital agenda, talk to us about the Intelligent Automation Platform.
