

The role of 5G in the future of cities

[MUSIC STARTS]

[Girl] My idea of a smart home is having a digital chef who will show me how to cook healthy meals based on what I have in my fridge.

Now that would be awesome!

[Wee Wei] This will soon become a reality with 5G technology.

With ultra-low latency and real-time connectivity at blistering speed, the way we do business is set to change.

[Nitin M.] Metaverse, for example, has the ability to host multiple services on a single digital platform where we can interact with avatars or attend virtual consultations using VR headsets in our own 5G homes.

These new connected experiences will transform our living spaces to be more efficient, sustainable and inclusive.

Putting the human experience at the core of design will be key when shaping hyper-connected cities.

[Wee Wei] The 5G revolution is not a matter of if, but when.
