Digital Operational Resilience Act

Minimising Cyber Risk for Financial Services
1 Security regulatory landscape
Security regulatory landscape

The European regulatory context widens and becomes more complex every day thus calling for transformation projects and remediation initiatives.

Regulatory Challenges

- **+5000 regulatory changes** in the last year across various sectors and multiple subject matters.
- **160 regulatory publications** generated within the last few months, the focus being risk management.
- 71% of firms expect the amount of regulatory information published to increase over the next 12 months.

Overview
Overview

Digital Operational Resilience Act (DORA) aims to consistently target digital risk for ALL financial entities.

Harmonisation of:
- ICT-risk management rules
- ICT-related incident management
- Digital operational resilience testing
- Management of ICT-Third-Party risk

Affected Parties
- All Operators in the financial sector
- Respective Third-Party Service Providers (including cloud computing services, software, data analytics and data centers)
2. Overview

The European Commission received public feedback on the proposals on the 12th of April 2021.

DORA has been published on European Union Official Journal on December 27th 2022 and will apply starting from 17th January 2023. It must be enforced by January 2025.

Compliance will be ensured by the entity’s competent authority.

EU Member states will have the right to impose penalties for breach of the obligations.
3

Background and Objectives
DORA sets new regulation for the Financial Sectors with the goal to minimise ICT risk on an European level

What is DORA?

DORA ("Digital Operational Resilience Act") is expected to be taken into effect during the first half of 2022.

DORA is a proposed regulation by the EU, with an aim to ensure the Financial Services sector is operationally resilient against ICT, security, and digital risks. The regulation will also aim to enhance and innovate the Financial Services sector as a whole.

The aim of this regulation is the harmonization of existing rules on managing ICT ("Information and Communication Technology") governance, ICT risk and incident reporting for all financial institutions to ensure operational resilience against ICT risks.

DORA will come into force as new regulation at European level and must be applied in an equal manner in all EU countries.
3. Background and Objectives

Enactment details

Entry into force
The regulation shall entry into force 21 days following its publication on EU official Journal (December 27th 2022).

Deadline for transposition
It shall transpose 24 months after the date of its entry into force (within January 17th 2025).

Essential content

- **ICT Governance**
  Update existing rules on ICT governance to align respective business strategies

- **ICT Risk Management**
  Key requirements and principles on ICT risk management

- **ICT Incident Reporting**
  Monitoring and reporting of ICT-related incidents

- **Digital Operational Resilience Testing**
  Regular performance of enhanced operational resilience tests

- **ICT Third-Party Management**
  Active management of ICT third-party risk and the contract design

- **Reporting to Authorities**
  Compliance with the regulation will be ensured by respective authorities
4
DORA Financial Services implications
The management body will be required to maintain an active and crucial role in the management of security risks and shall pursue the respect of a strong cyber hygiene. The following must also be ensured with regard to security: (i) clear definition of roles and responsibilities for all ICT-related functions, (ii) continuous engagement to risk control and monitoring through defined processes, (iii) appropriate allocating of ICT investments and trainings.

REQUIREMENTS

- Directly involve the management body in the ICT risk assessment process and foreseen the explicit assessment and control of residual risks
- Plan specific security investments
- Implement and record the execution of security awareness programs

IMPLICATIONS
Financial Entities are required to set-up and maintain resilient ICT systems and tools that minimise the impact of ICT risk, implementing appropriate protection and prevention measures and continuously define solutions that cover all relevant scenarios.

**IMPLICATIONS**

- Update the ICT Risk management framework, envisaging its integration with the Business Continuity and Disaster Recovery plan
- Evolve the Business Continuity and Disaster Recovery plan towards an Operational Resilience plan considering cyber attack scenarios and related countermeasures
INCIDENT REPORTING

REQUIREMENTS

Financial Entities are required to establish and implement a process for monitoring and managing ICT related incidents, classifying them based on criteria to be developed by a joint committee of European Supervisory Authorities (ESAs).

IMPLICATIONS

• Provide constantly updated incident reports, informing customers of any potential impacts
• Define or modify the incident reporting processes currently implemented, in accordance with the new guidelines
In accordance with the principle of proportionality and thus depending on the size, business and risk profile, Financial Entities are required to conduct advanced threat-lead penetration tests of ICT tools and systems.

The regulation sets out requirements for testers and the recognition of threat-lead penetration tests results across the Union for financial entities operating in several Member States.

**IMPLICATIONS**

- Involve qualified Third Parties in the conduction of red-teaming activities in accordance with the TIBER-EU framework
- Involve qualified personnel to perform the testing activities
ICT THIRD-PARTY

REQUIREMENTS
Enable comprehensive risk monitoring of ICT Third Parties during the preliminary, execution, and post-contractual phases of the relationship. Maintain a Register of Third Parties for which specific requirements/contractual clauses should be defined.

IMPLICATIONS
• Design and implement processes for defining and continuously reviewing contractual and technical security measures relating to Third Parties, based on related service levels agreed.
REQUIREMENTS
Financial entities are required to set-up arrangements to exchange amongst themselves cyber threat information and intelligence, to reduce its propagation and supporting defense capabilities.

IMPLICATIONS
• Define protocols for exchanging and sharing information with other financial entities on security threats and events, also relying on the support of system/national structures.
Next steps
Q3/2020 DORA proposal publication

Q1/2021 Public feedback to the European Commission on the proposal

Q1/2022 As-is analysis, DORA assessment & roadmap definition

Q4/2022 DORA publication on EU Official Journal (December 27th 2022)

Q1/2023 DORA will apply starting from January 17th 2023 (21 days after be published on EU Official Journal)

Q1/2025 DORA must be enforced by January 17th 2025 (24 months after be enacted into law)
Our Assets

Accenture will support clients on the organisational as well as the technical implementation of DORA
Set up / improve ICT risk and security management regulation according to standard, best practices and experiences from other countries

Provide our benchmark services in order to set security investment aligned to comparable players

Provide security awareness as a service leveraging on our platforms

Apply new Operational Resilience framework developed for integrate cyber attack

Implement versioning / back-up solutions for manage «cold copies» against ransomware attack

Specific ICT risk evaluation for cloud services with our Cloud Security express service

Set up / improve incident management and reporting processes according to standard, best practices and experiences from other countries

Provide red teaming exercise by our Global team in order to identify customer threat exposure according to TIBER-EU framework

Accenture is leader in the execution of red teaming exercise thank to the support delivered to several Authorities and is CREST/CBEST certified

Provide Third Party Risk Management as a service supported by automation and tools for reducing operating costs of control

Set up / improve security data exchange process according to standard, best practices and experiences from other countries
